

Online Activity 1

Basic Linux Commands

1. `pwd – pwd`
 - It displays the full path of the directory that you are currently working in.
2. `list – ls -l`
 - It listed all the files and folders in the current directory.
3. `mv – mv old_name.txt new_name.txt`
 - It moves the files and gives a file a new name in the same place.
4. `rm -r old_folder`
 - It deleted the specified files or directories.
5. `mkdir – mkdir NewLab`
 - It creates a new directory.
6. `touch – touch lab.txt`
 - It creates a new empty file on an existing file.
7. `cp – cp lab.txt /home/user/Backup`
 - It copies the files or the directories from one location to another.
8. `ps – ps aux`
 - It displays the information about the currently running processes in the system.
9. `curl – curl -I https://www.example.com`
 - It transfers the data to or from a server using supported protocols like HTTP, HTTP, FTP, etc.
10. `cd – cd /home/user/Documents`
 - It used to navigate between folders.

4. Command: `git commit`
 - SU: `git commit -m "message"`
 - Common Options / Flags: `-m "message"`
 - It is the save point of the project.
5. Command: `git log`
 - SU: `git log`
 - Common Options / Flags: `-n <number>`
 - It displays the ordered history of all past commits made in the current branch.
6. Command: `git diff`
 - SU: `git diff`
 - Common Options / Flags: `--staged`
 - It shows the exact code between unstaged, staged files to separate commits.
7. Command: `git restore`
 - SU: `git restore lab.txt`
 - Common Options / Flags: `--staged`
 - It discards the uncommitted changes in the directory to restore files back to a previous file.
8. Command: `git branch`
 SU: `git branch feature-login`
 Common Options / Flags: `-a`
 It manages the branches in your repository, it allows you to create, delete, list branches.

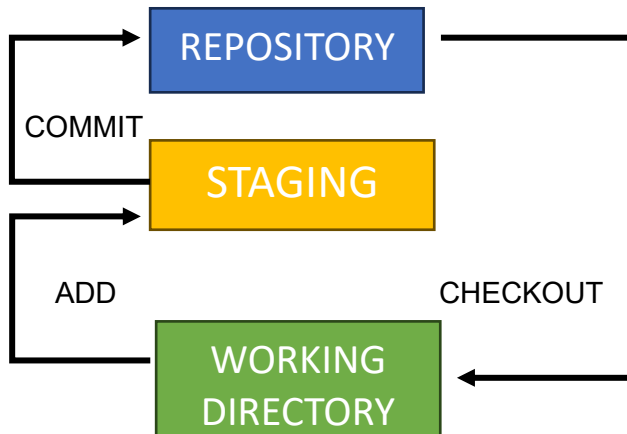

Basic Git Commands

1. Command: `git init`
 - SU: `git init`
 - Common Options / Flags: `-b <branch>`
 - It creates a new, empty local git repository in the project folder.
2. Command: `git status`
 - SU: `git status`
 - Common Options / Flags: `-b`
 - It displays the current state of the directory.
3. Command: `git add`
 - SU: `git add lab.html`
 - Common Options / Flags: `-p`
 - It moves the new files into the staging area and being processed to commit.
9. Command: `git checkout / git switch`
 - SU: `git checkout feature-login / git switch feature-login`
 - Common Options / Flags: `-c / -b`
 - It switches active branches or to update the handles branch.
10. Command: `git merge`
 - SU: `git merge feature-login`
 - Common Options / Flags: `--abort`
 - It combines history and changes a target branch into your working branch.
11. Command: `git tag`
 - SU: `git tag L1.0.0`
 - Common Options / Flags: `-a`
 - It marks specific commits typically used to named reference points.

12. Command: git clone

- SU: git clone
<https://github.com/201301577/repo.git>
- Common Options / Flags: -b <branch>
- It downloads a remote repository onto your local computer

THE THREE – TREE ARCHITECTURE OF GIT
